

HIDDEN DIVERGENCE

WELCOME TO THE TRADER SOCIETY HIDDEN DIVERGENCE COURSE

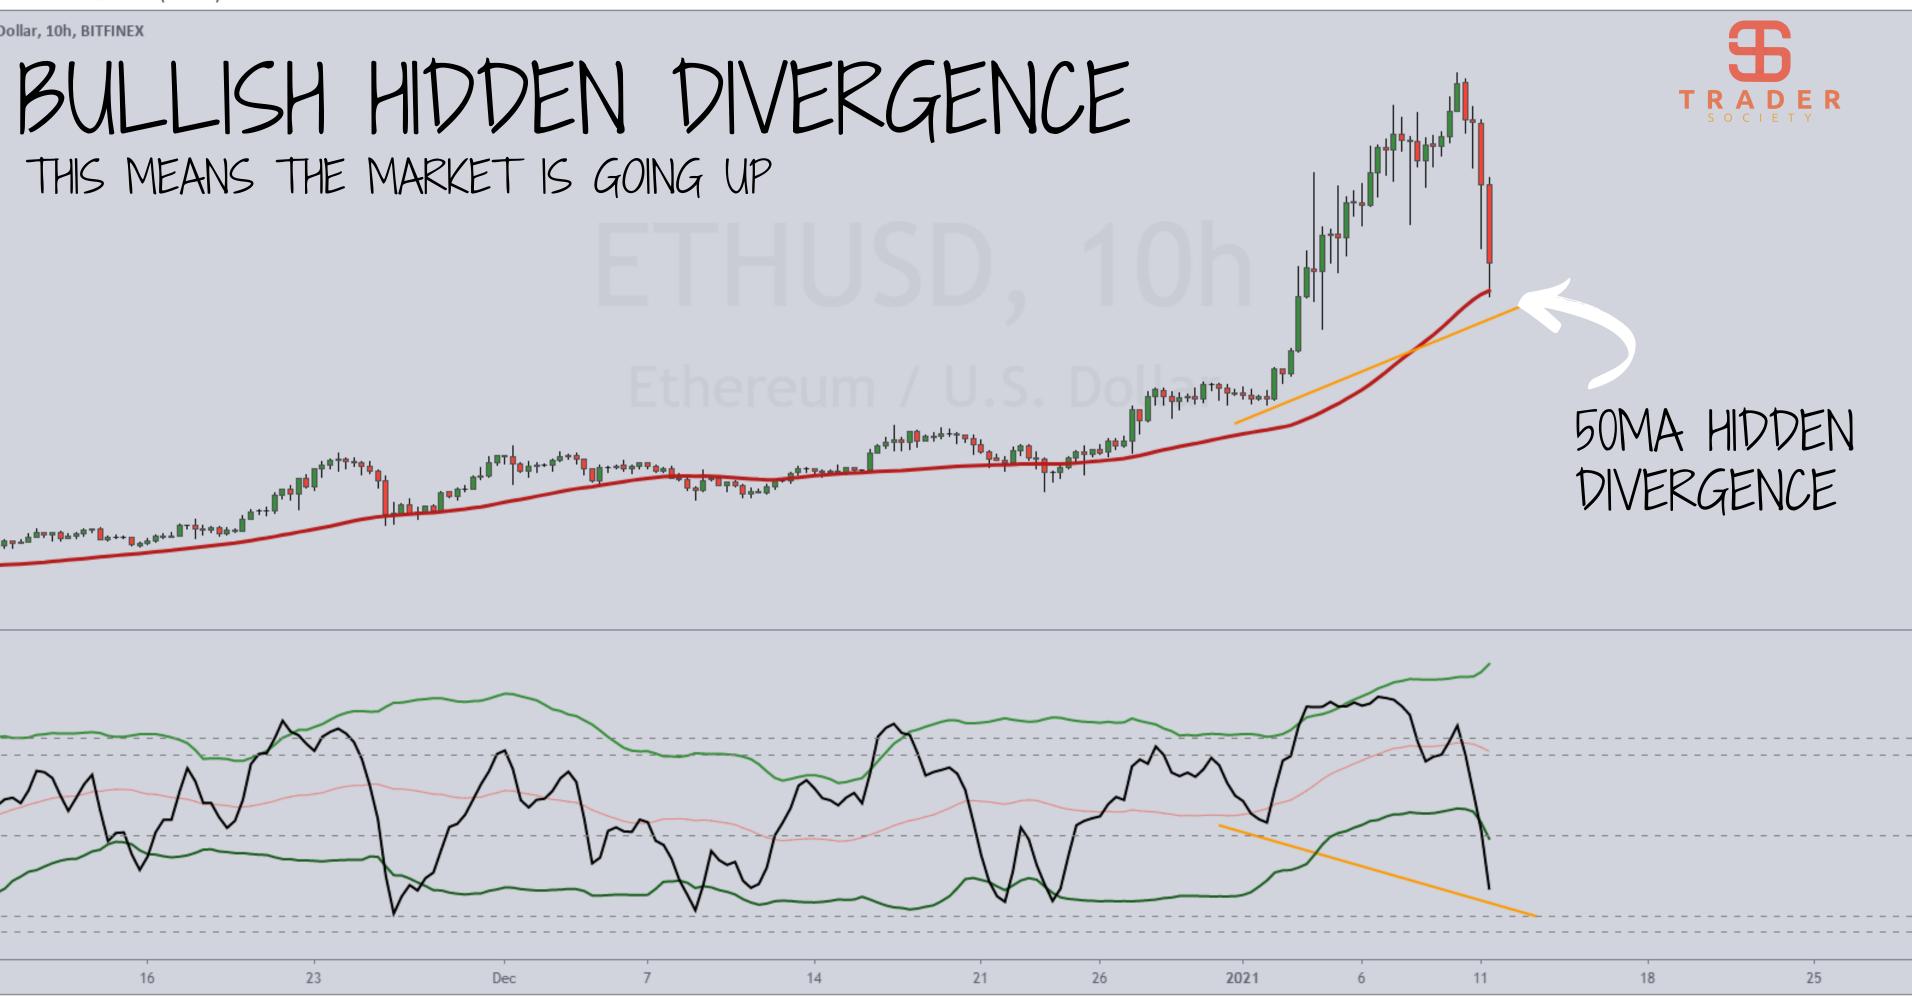

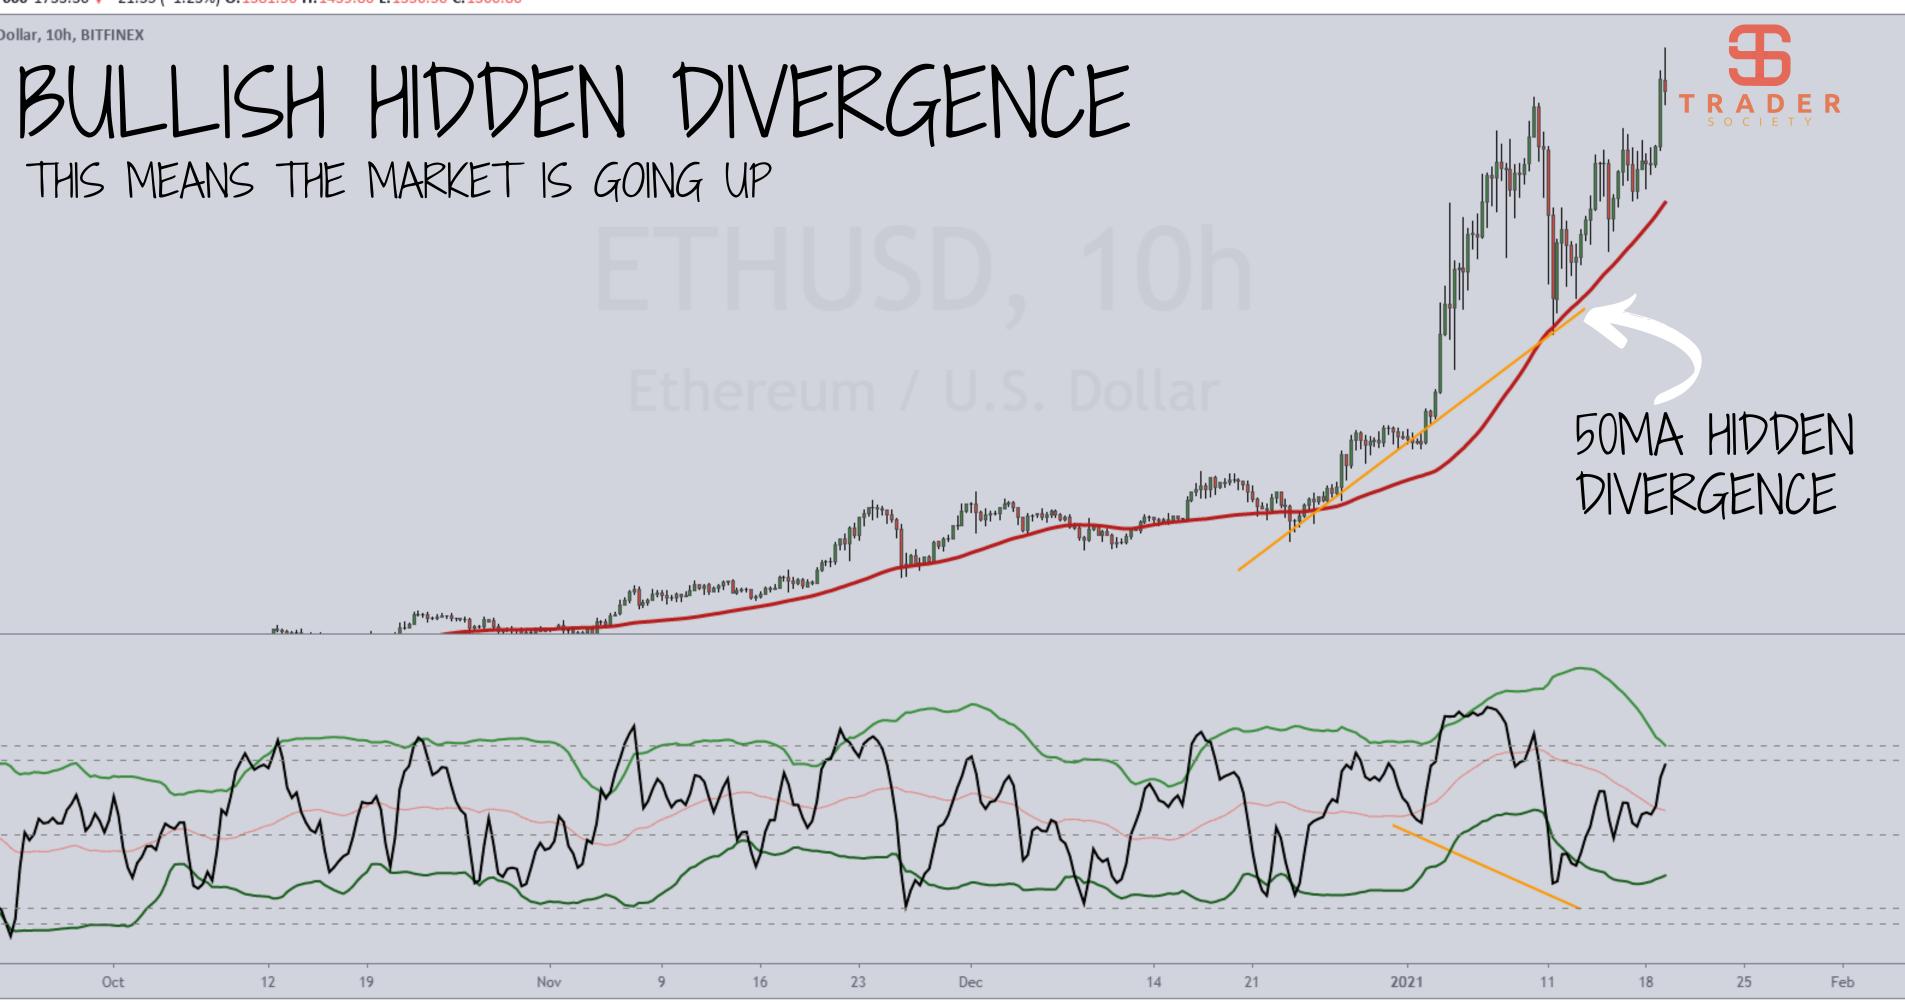

IN THIS VIDEO YOU ARE GOING TO LEARN EVERYTHING YOU NEED TO KNOW ABOUT HIDDEN DIVERGENCE AND HOW IT IS USED IN MY STRATEGY.

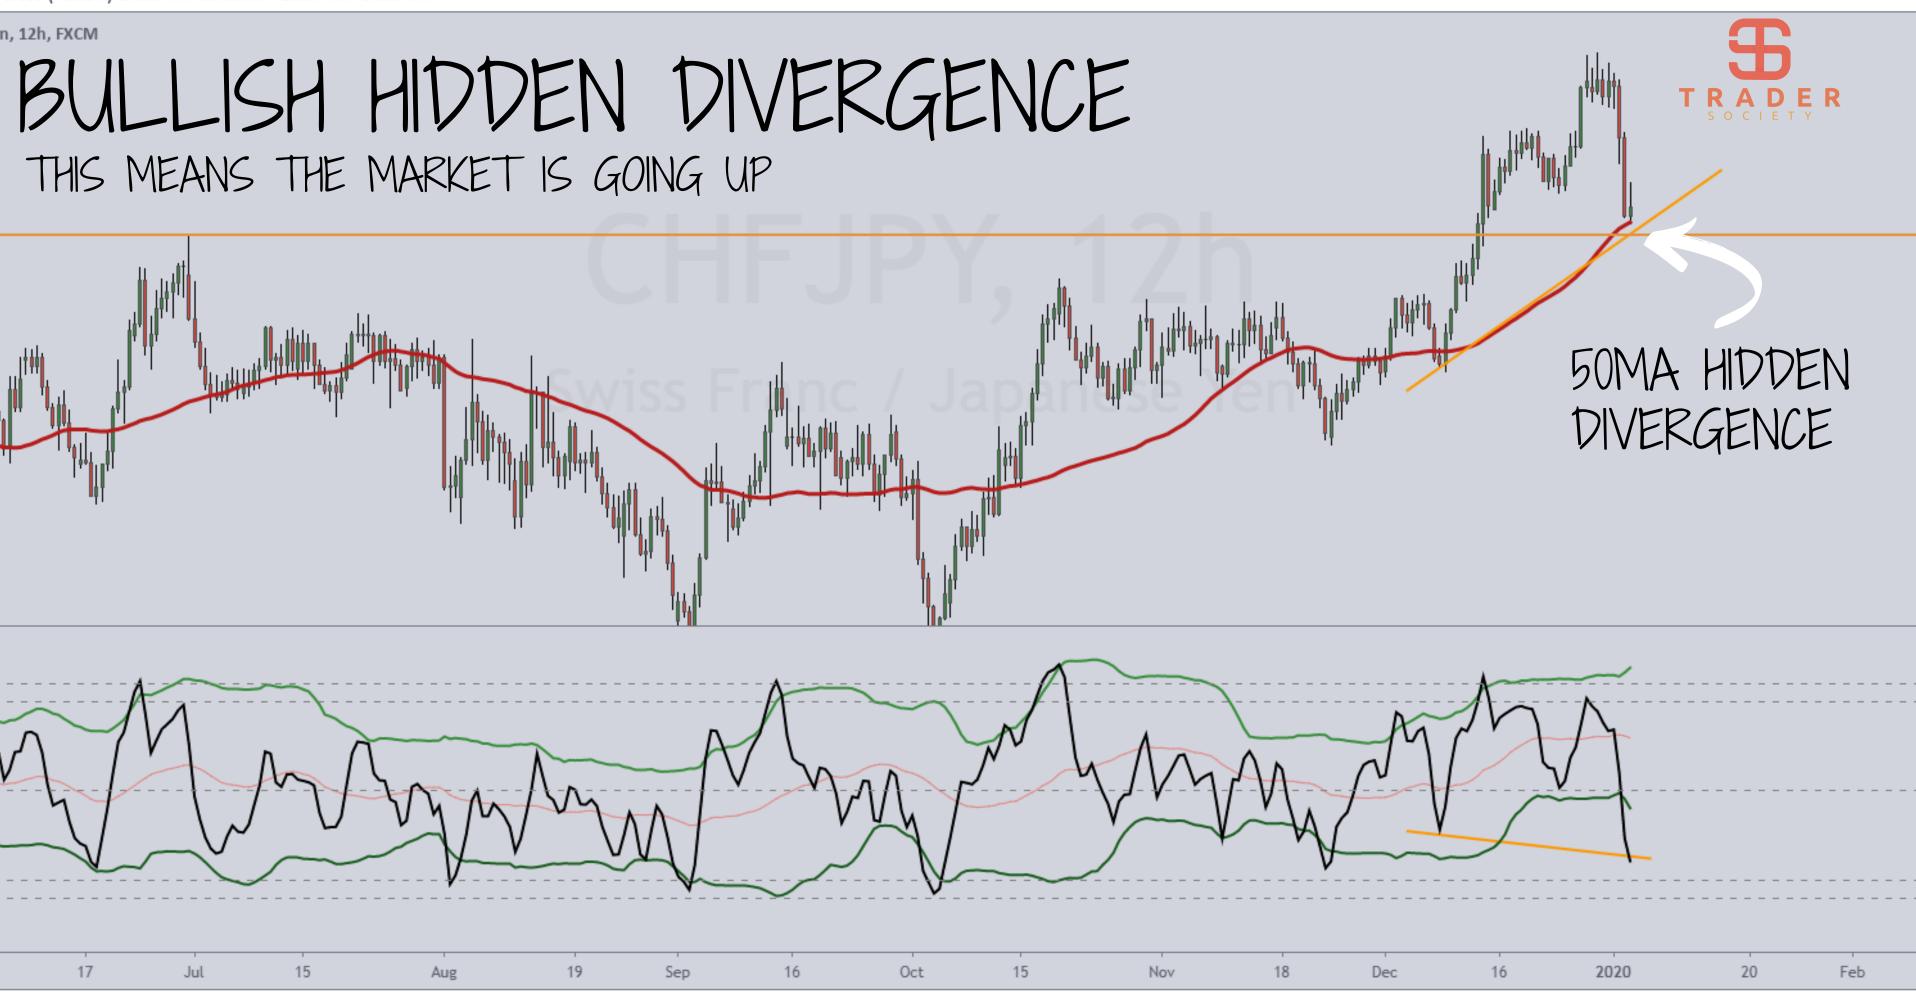

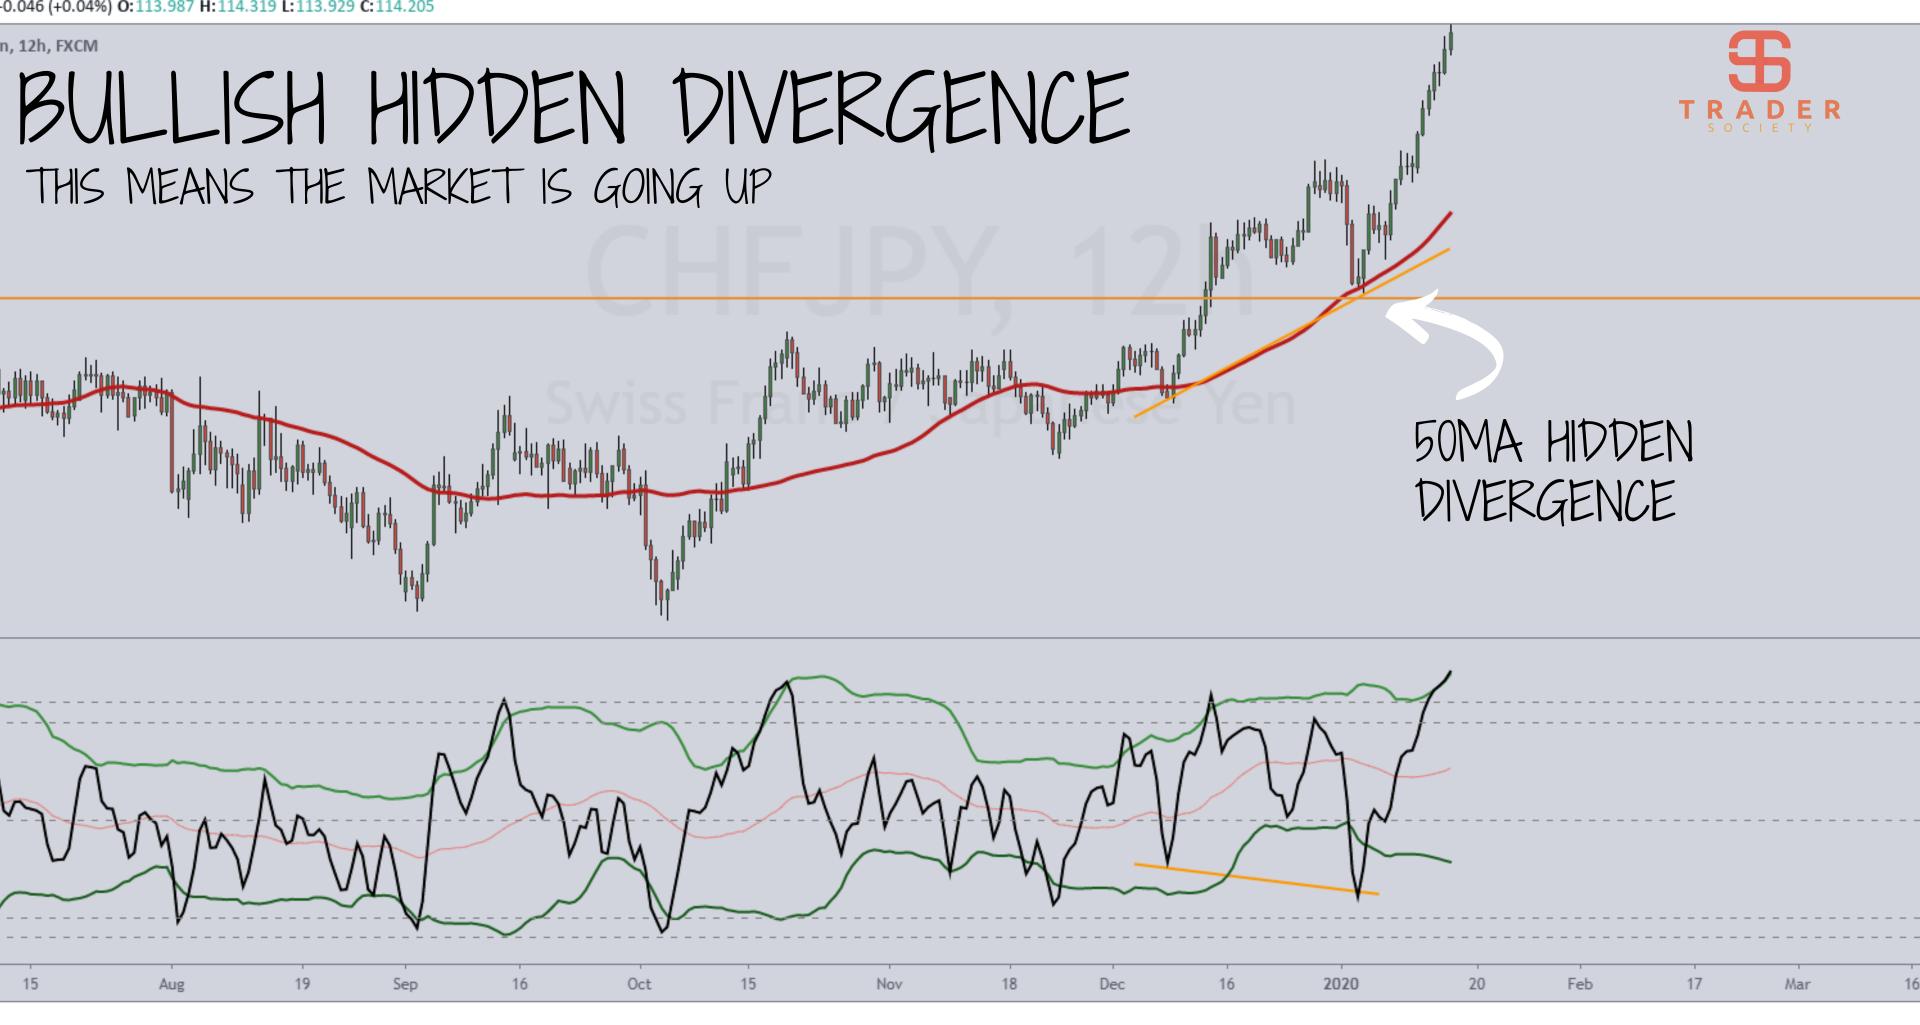

WHATIS HIDDEN DIVERGENCE IN FOREX TRADING? pause to take notes

- Hidden divergence occurs when the oscillator (rsi)
 makes a higher high or low while the price action
 does not. This often tends to occur within an existing
 trend and usually indicates that there is still strength in
 the prevailing trend and that the trend will resume.
- Hidden divergence is one of my favorite trade set ups in conjunction to how I trade it within my strategy.
- I have many rules to how I can take a hidden divergent trade, here is my list.
- The trade has to be taken off the 50ma, and very rare but good occasions the 200ma
- The trade has to be taken with some sort of structure, like support and resistance, trendline, and a key Fibonacci level
- We have to have a hidden divergent sharkfin.

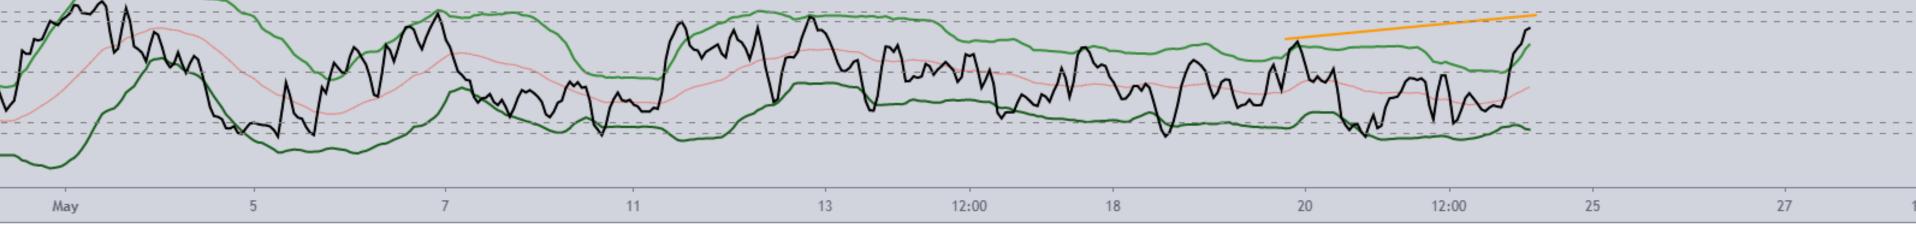

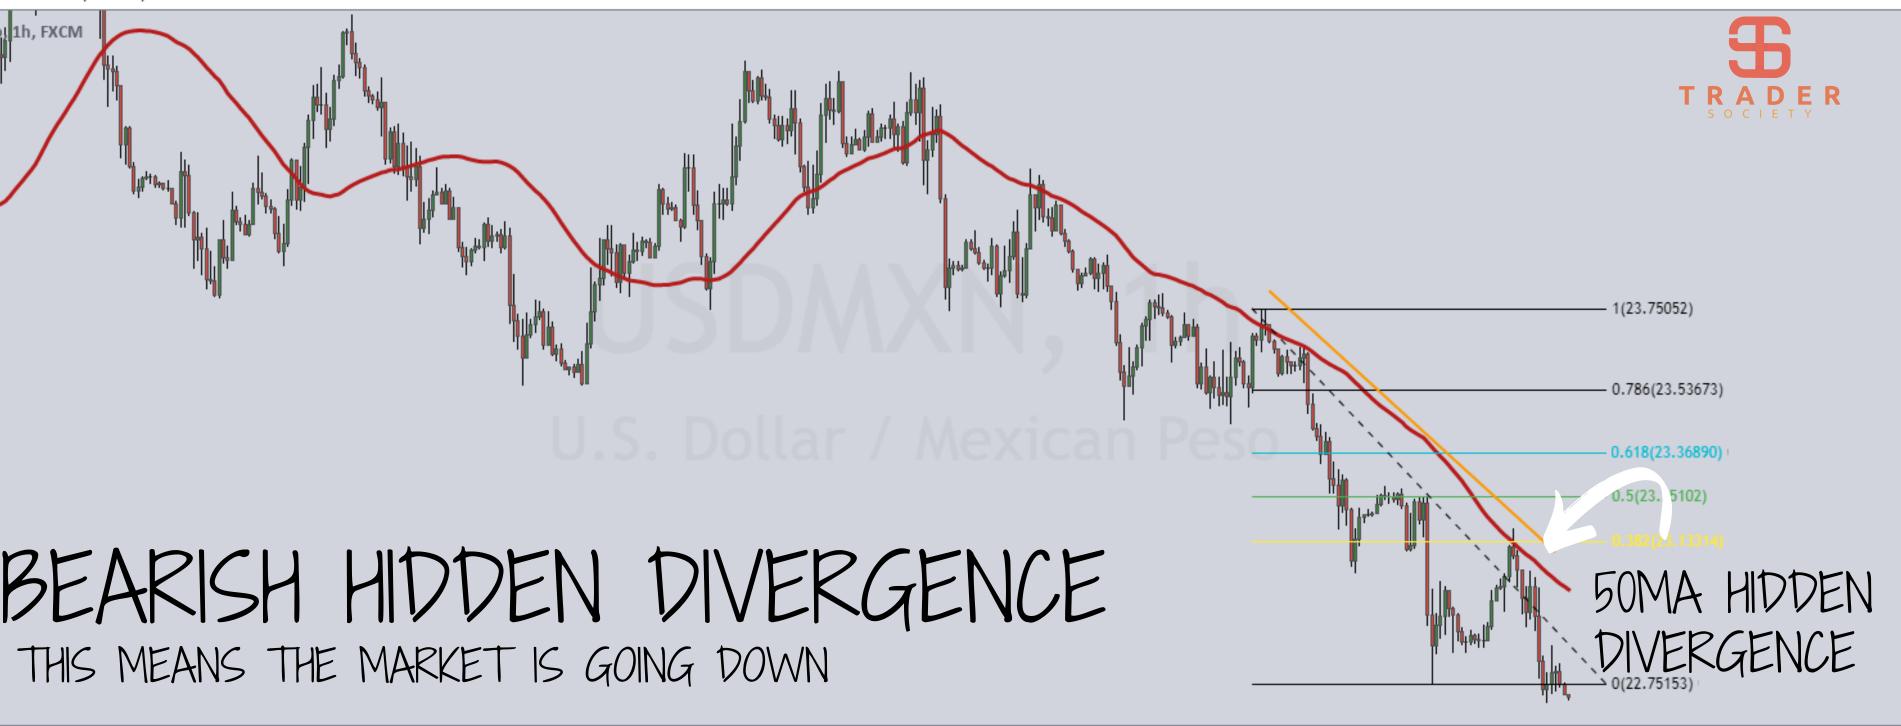

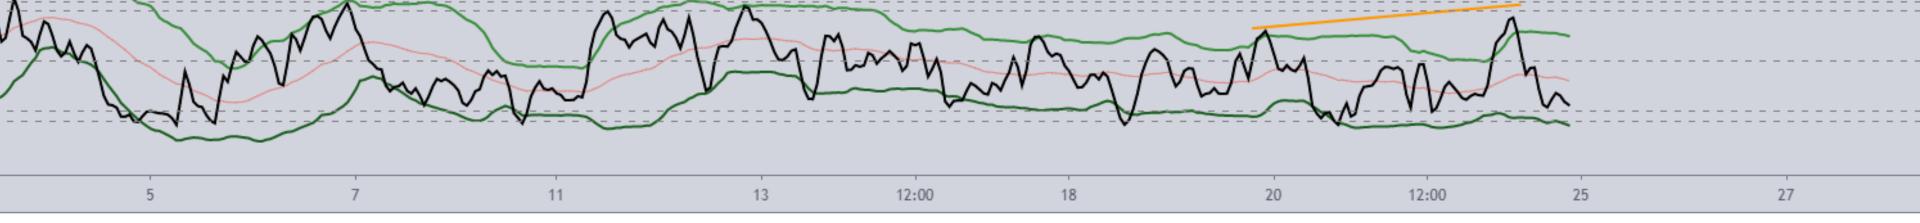

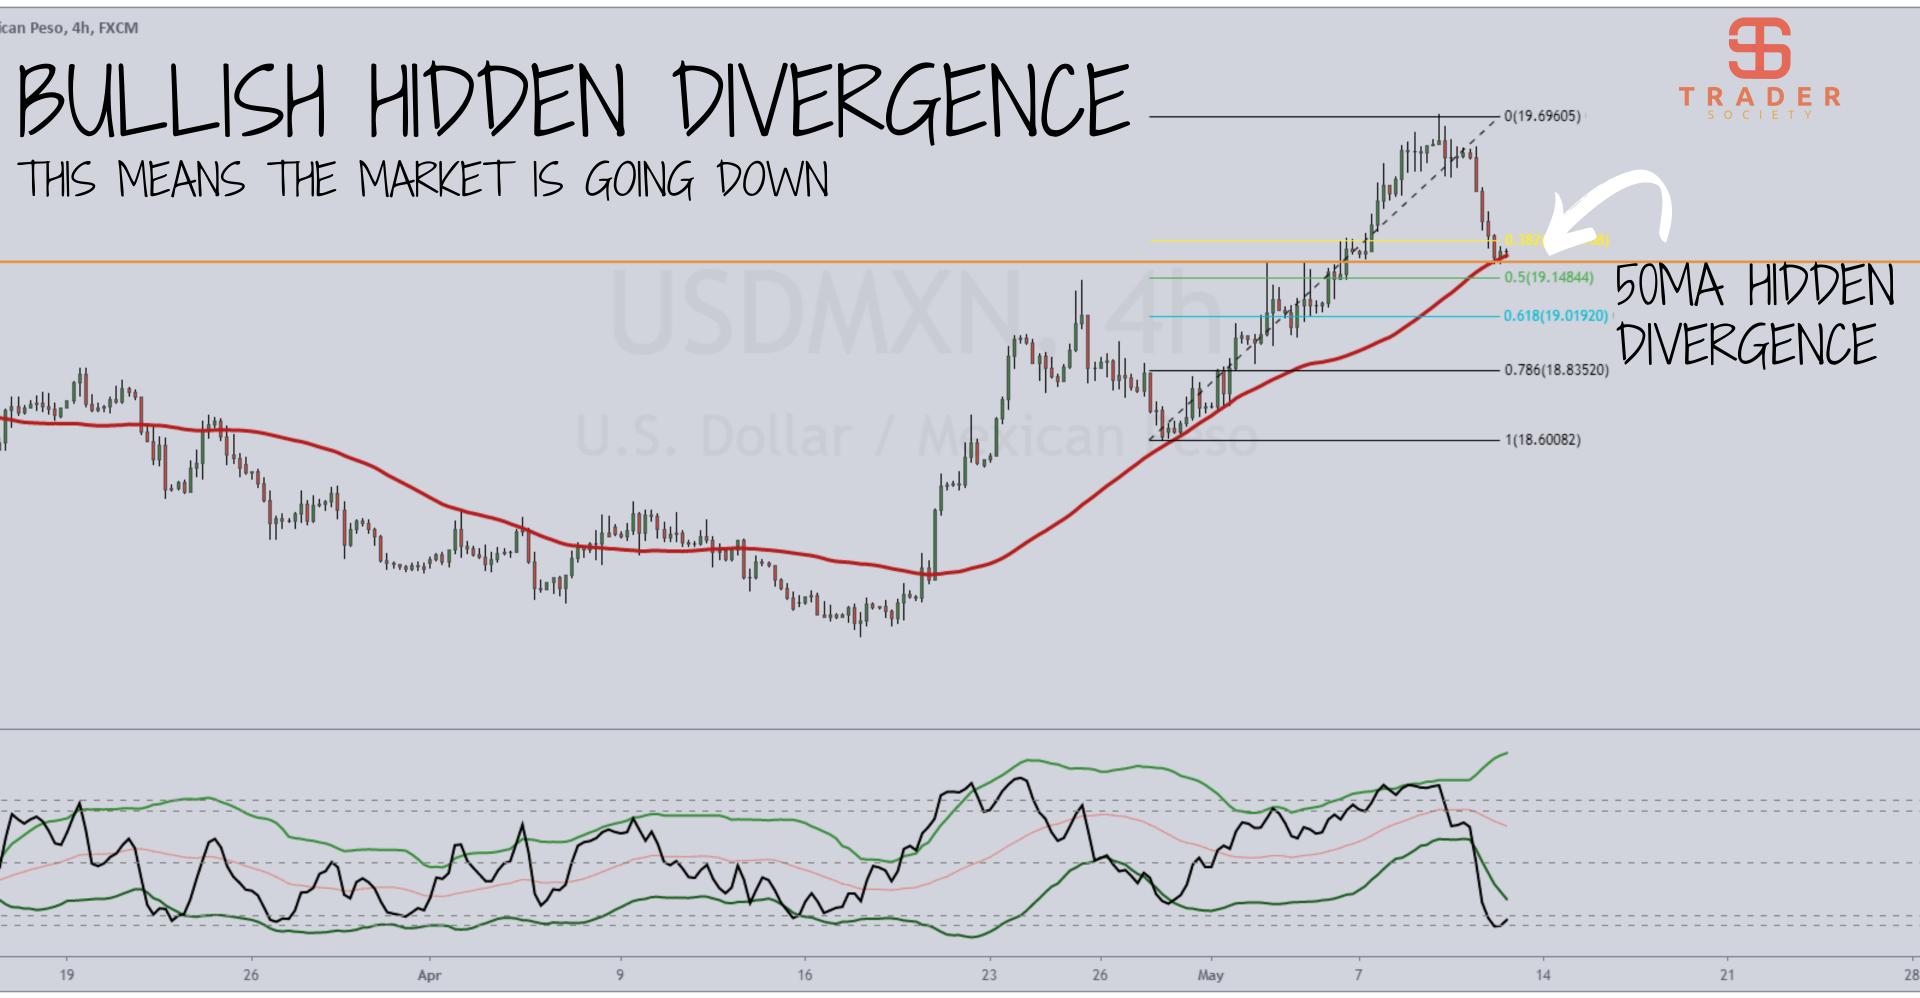

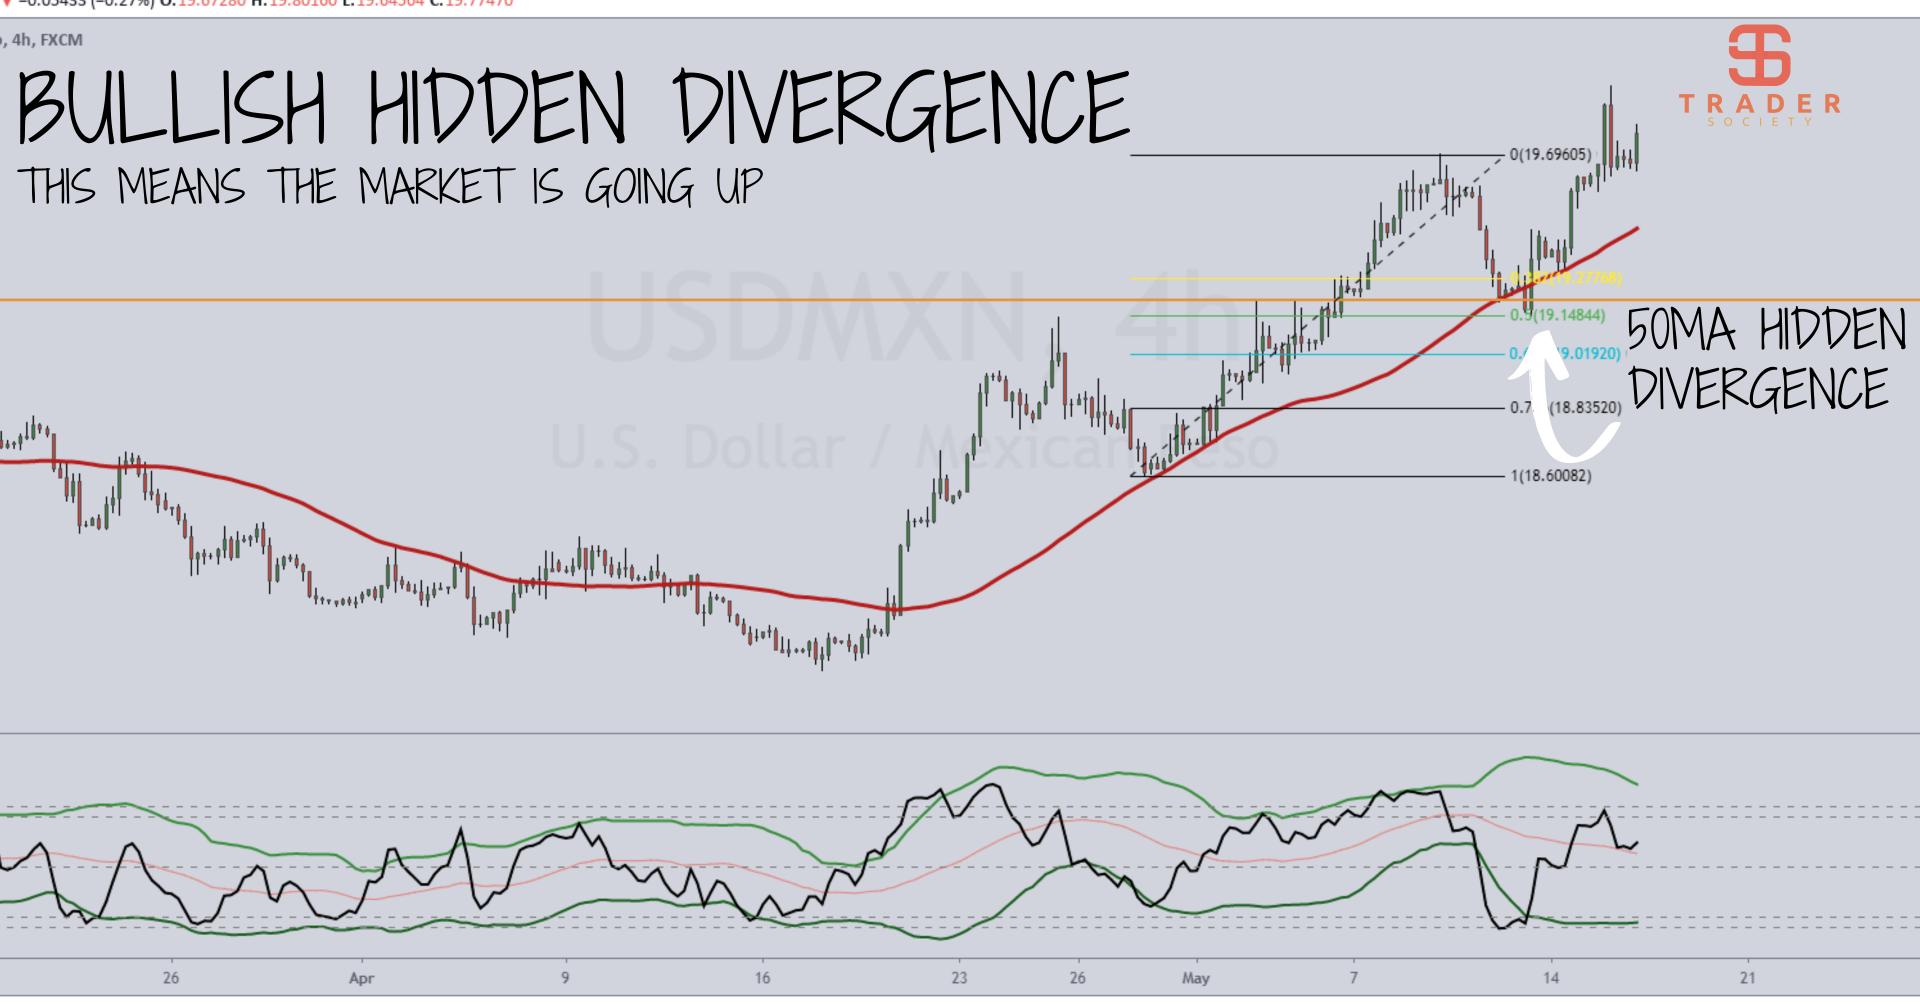

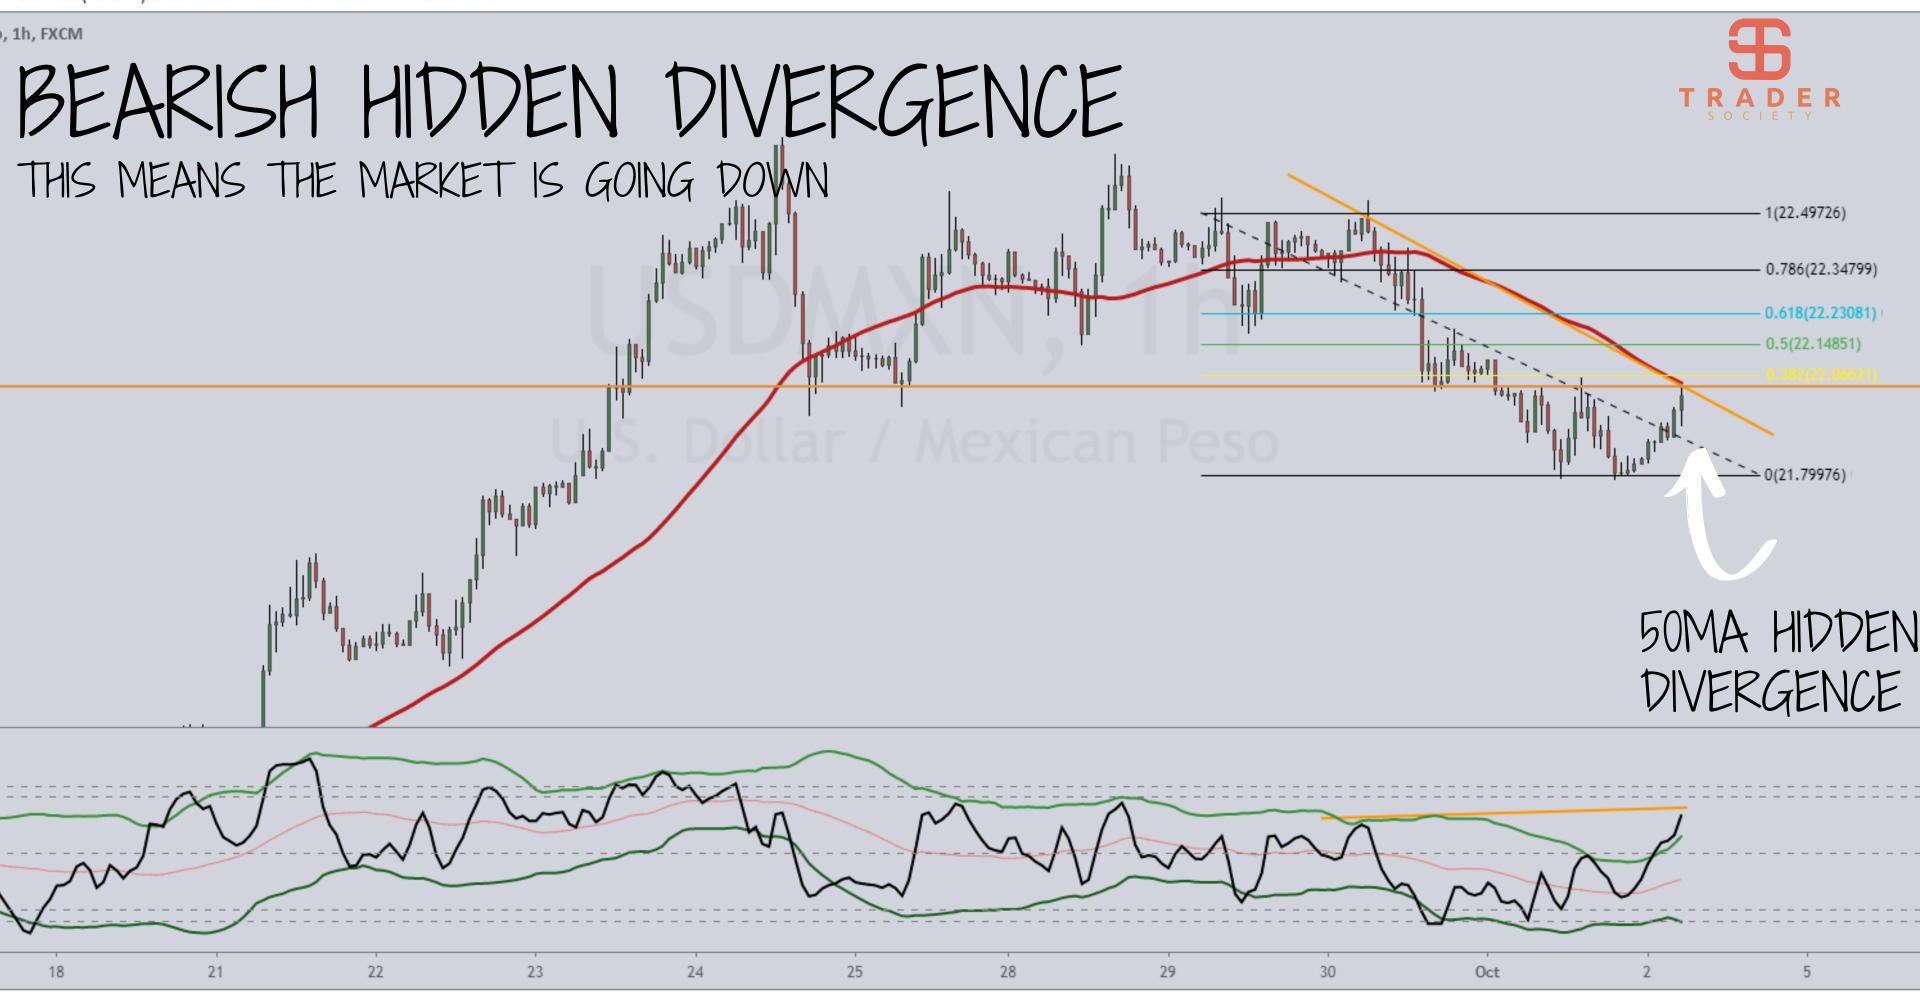

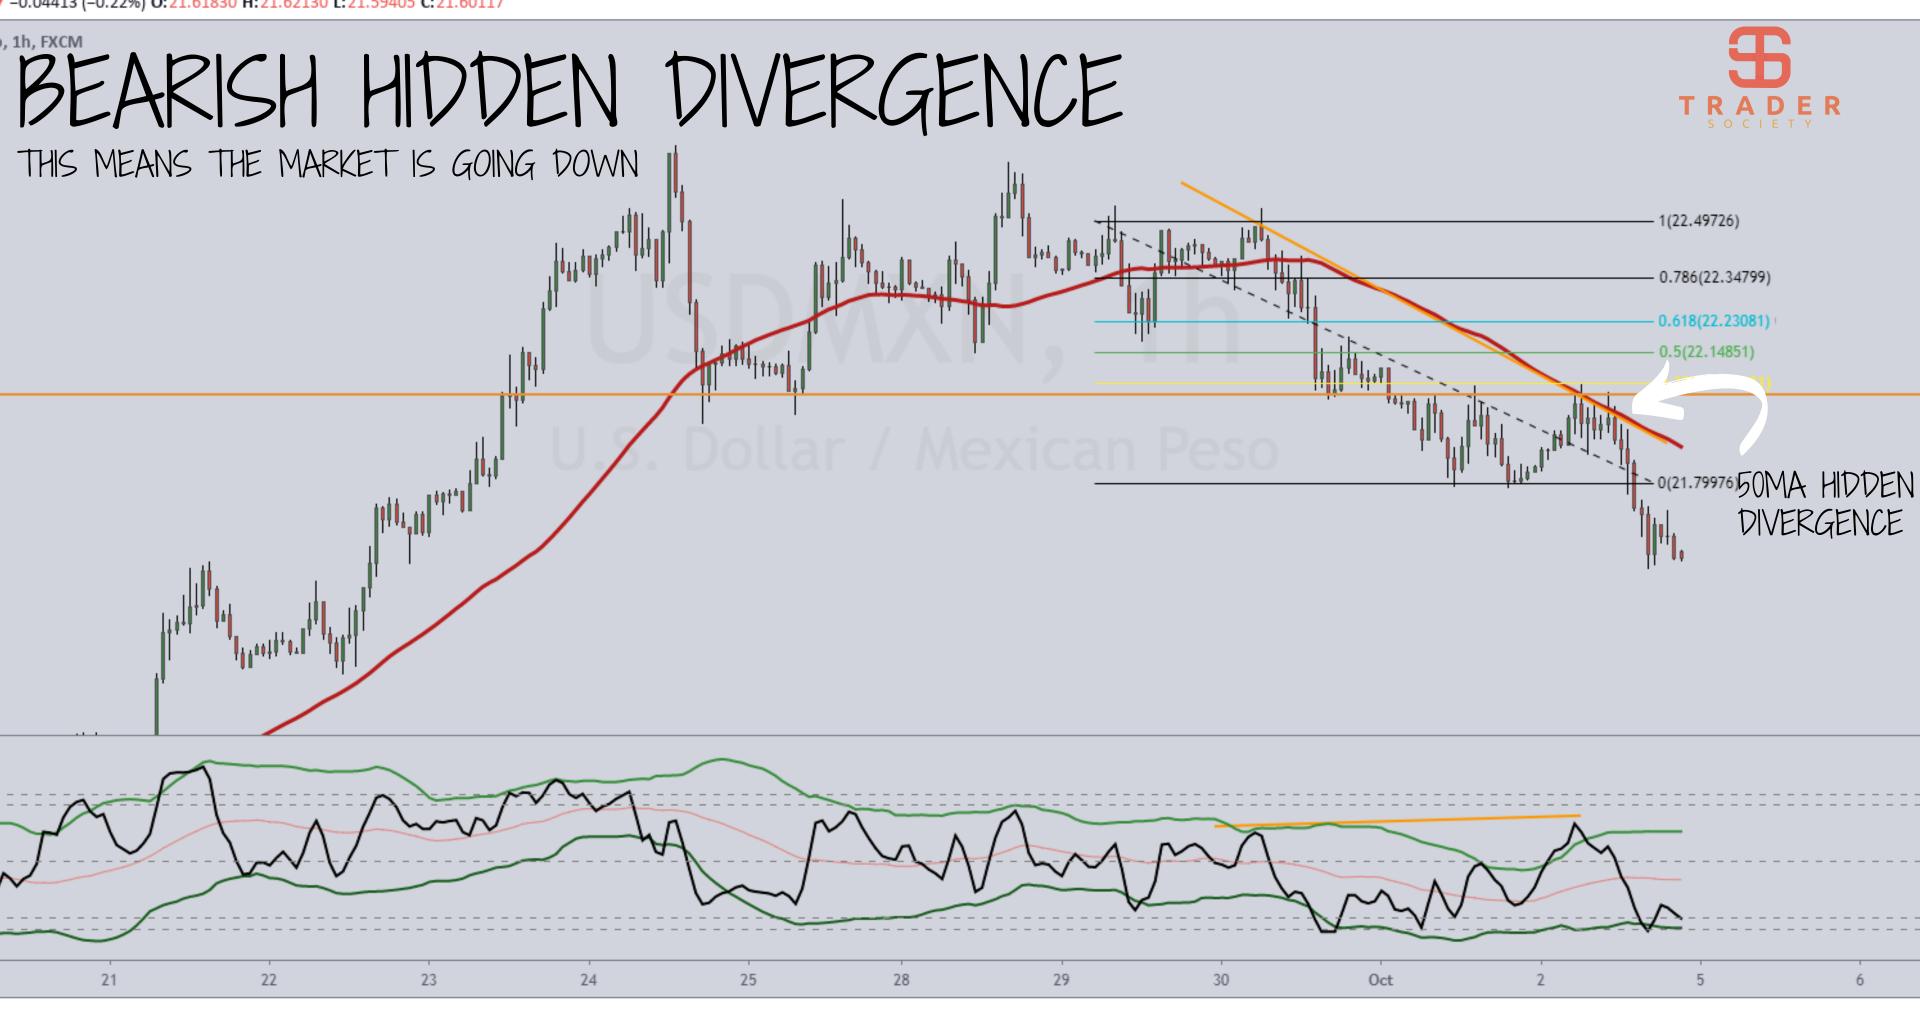

HIDDEN DIVERGENCE SUPPORT TURNED RESISTANCE pause to take notes

- Often times hidden divergence will work off of a major support area.
- My favorite type of hidden
 Divergence trades are when
 there is a previous major support
 or resistance are broken and the
 market retest the support turned
 resistance or resistance turned
 support.
- This will still always take place off the 50MA, and usually a key fit area.
